Installing the LightBurn macro for CorelDraw

After installing LightBurn, open up a Windows Explorer (just browse on your computer or hard drive).

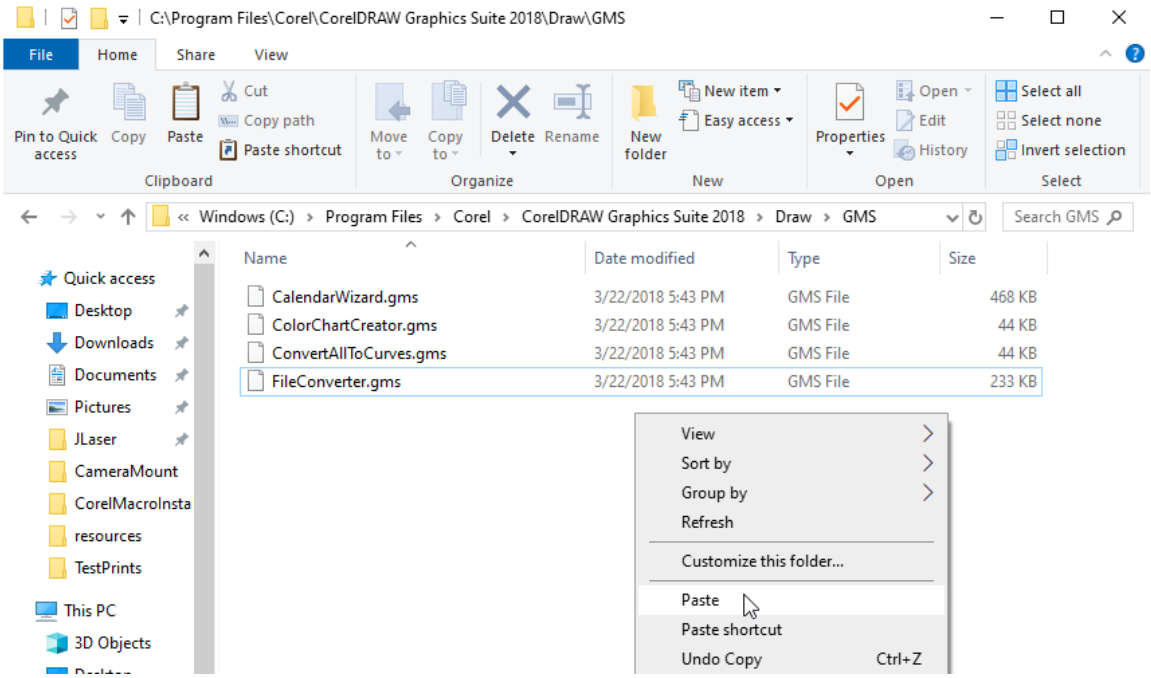

Find the LightBurn install folder in C:\Program Files\LightBurn, and locate the ExportToLightBurn.gms file - this is the Corel macro we'll be installing, but you need to copy it into your user macro folder for Corel to find it. The correct location will depend on the Corel version you have.

Right-click the ExportToLightBurn.gms file and choose 'Copy':

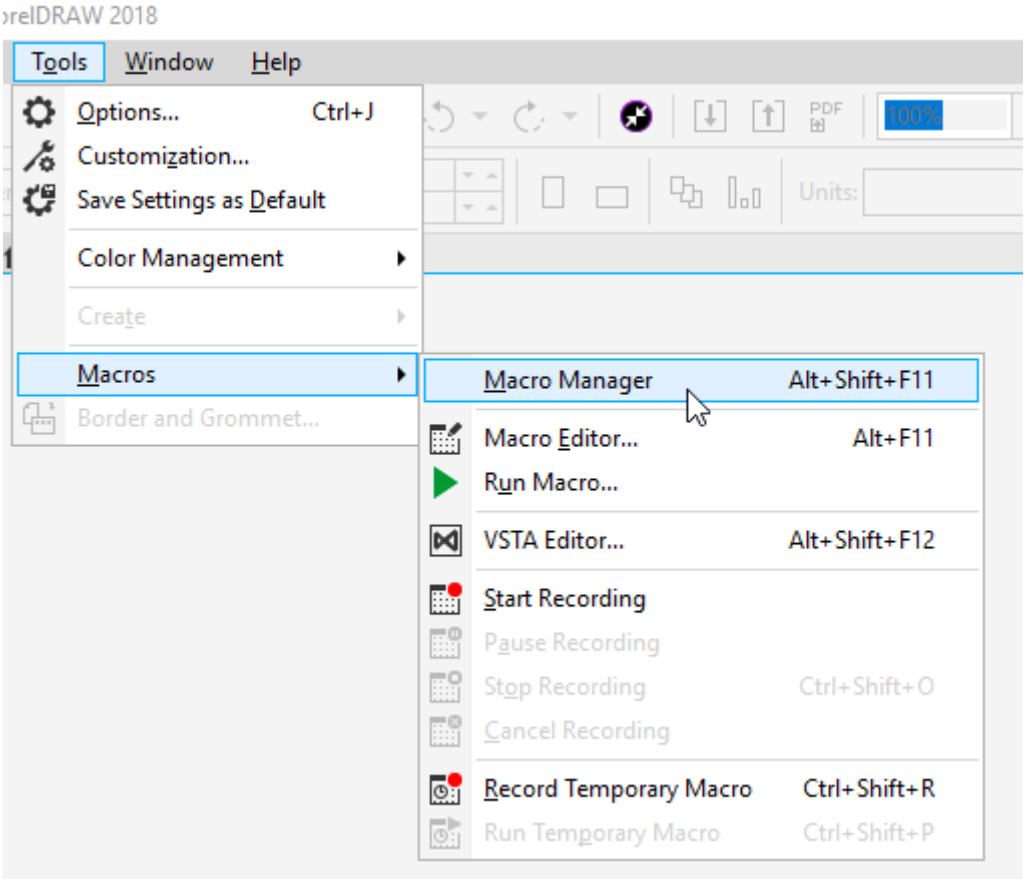

Now, browse to your CorelDraw install path - Go to C:\Program Files\Corel

Inside that folder should be another called 'CorelDRAW Graphics Suite xxx' where xxx is your CorelDraw version. Double click that folder, and within it should be another, called Draw, and inside that should be one called GMS. That's where we're going to paste the LightBurn export script, like this:

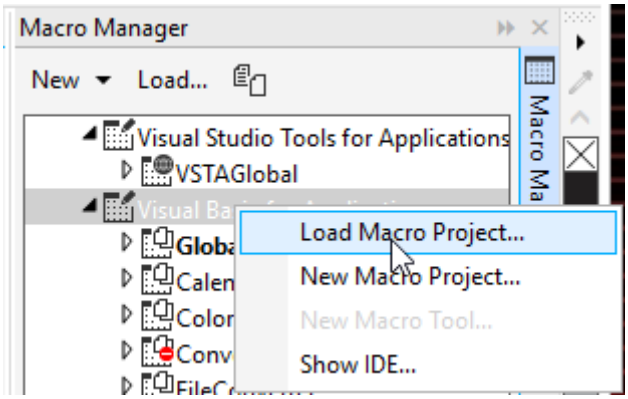

Windows might ask you for permission to copy to this folder - say yes.

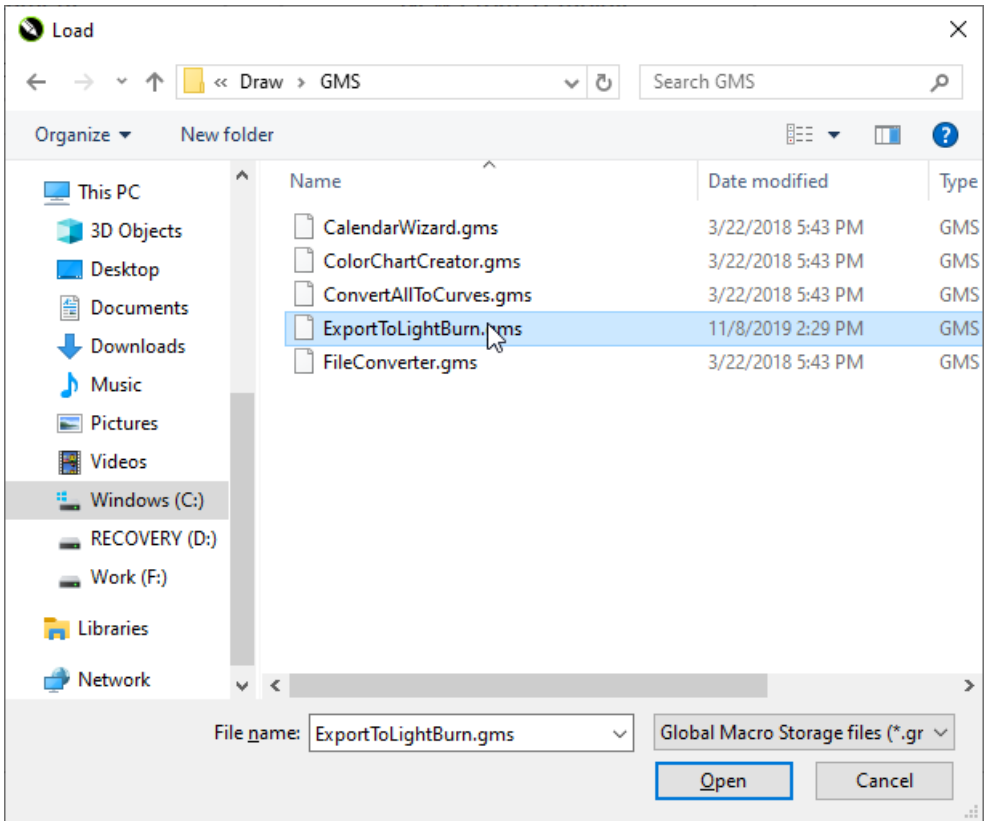

Now, run your version of CorelDraw. Once it's running, open the Macro Manager, like this:

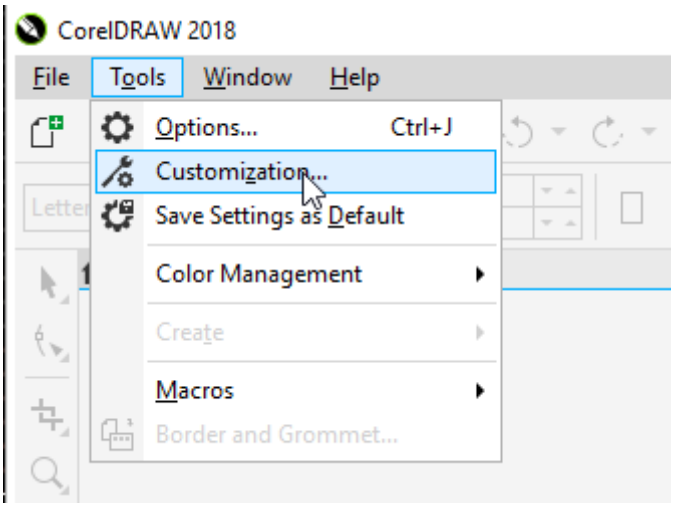

In the Macro Manager window, under the Visual Basic for Applications entry, right-click, then select Load Macro Project:

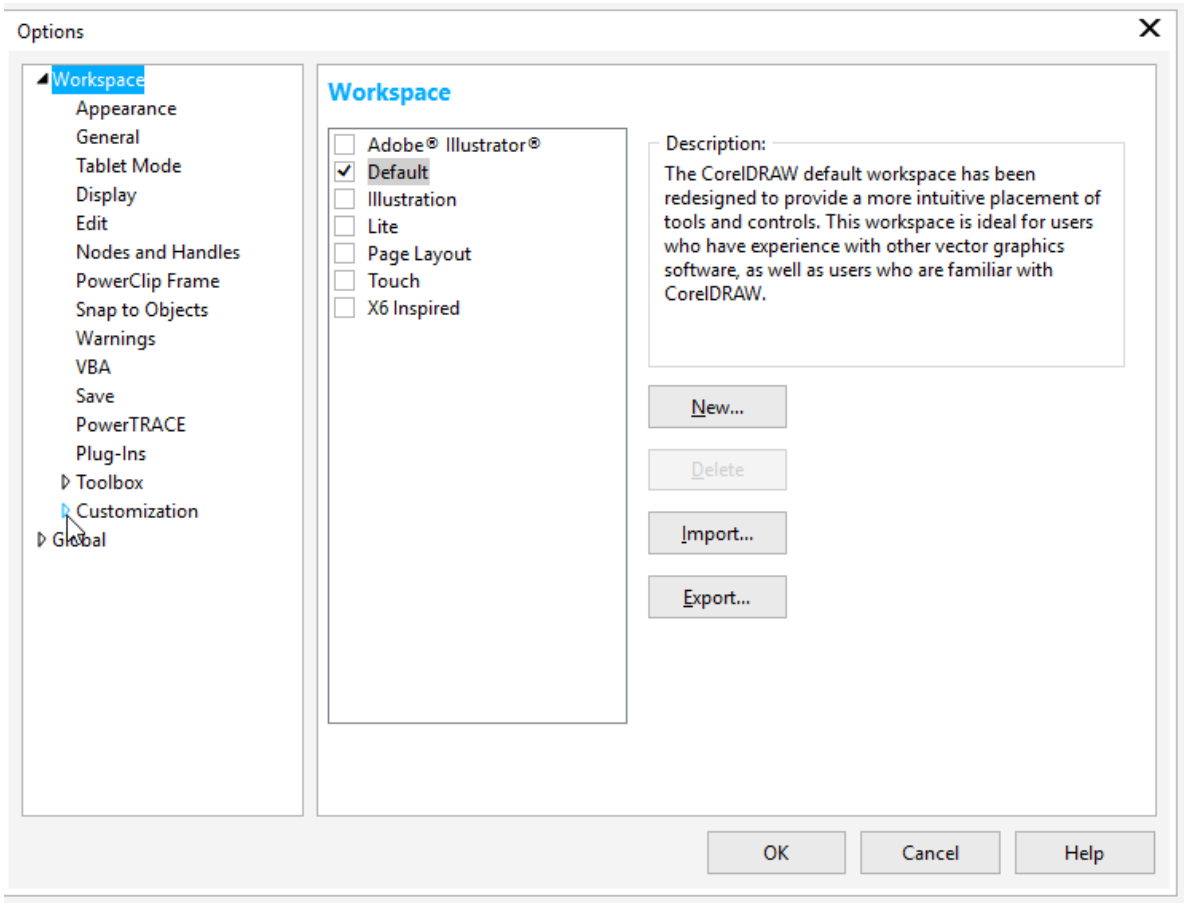

Browse to the same GMS folder as before, in C:\Program Files\Corel\CorelDraw Graphics Suite xxx\Draw\GMS, and select the ExportToLightBurn.gms macro project:

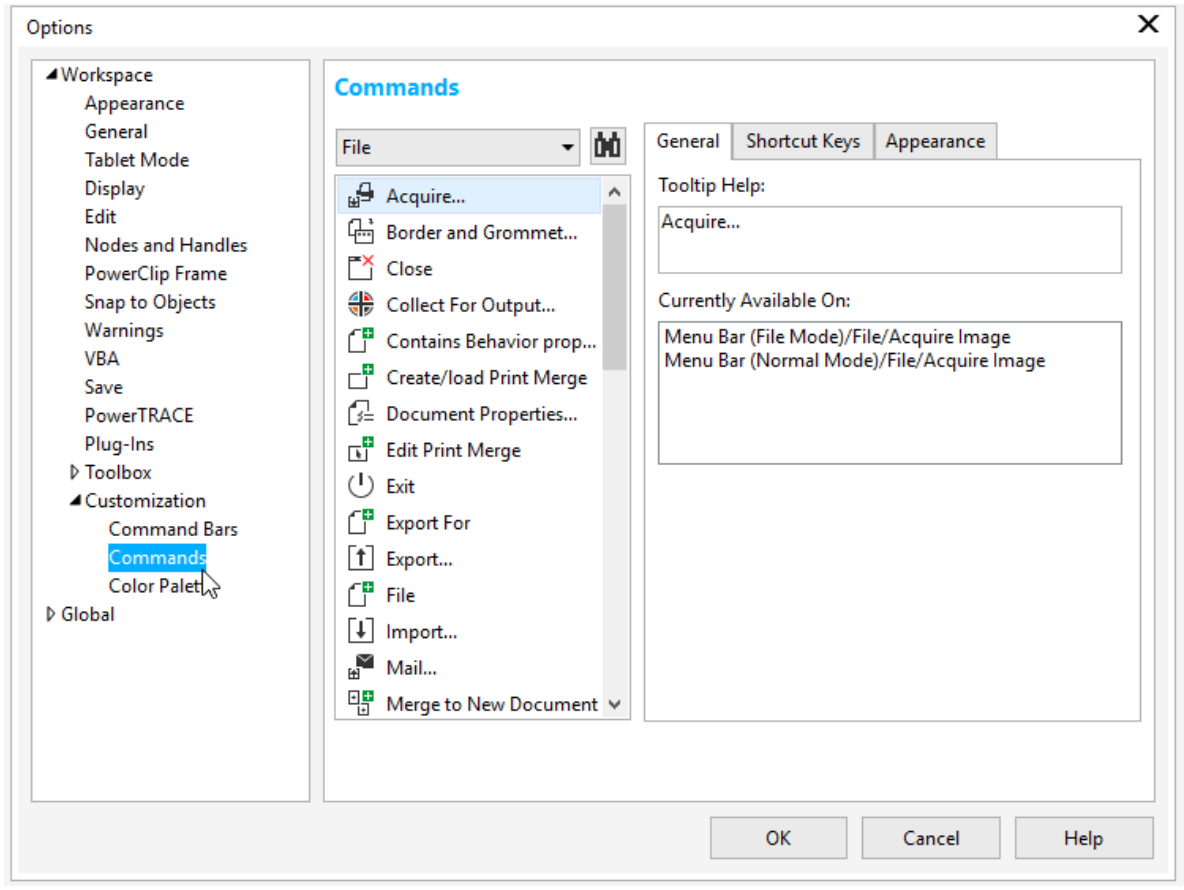

Now, go to Tools > Customizations:

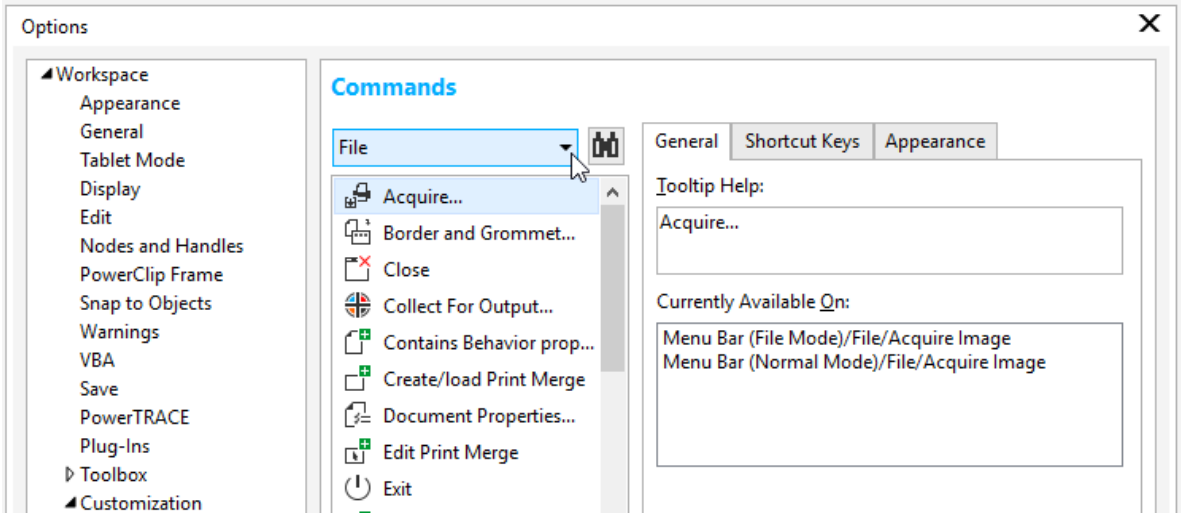

Expand the entry for Customization by clicking the small triangle highlighed here:

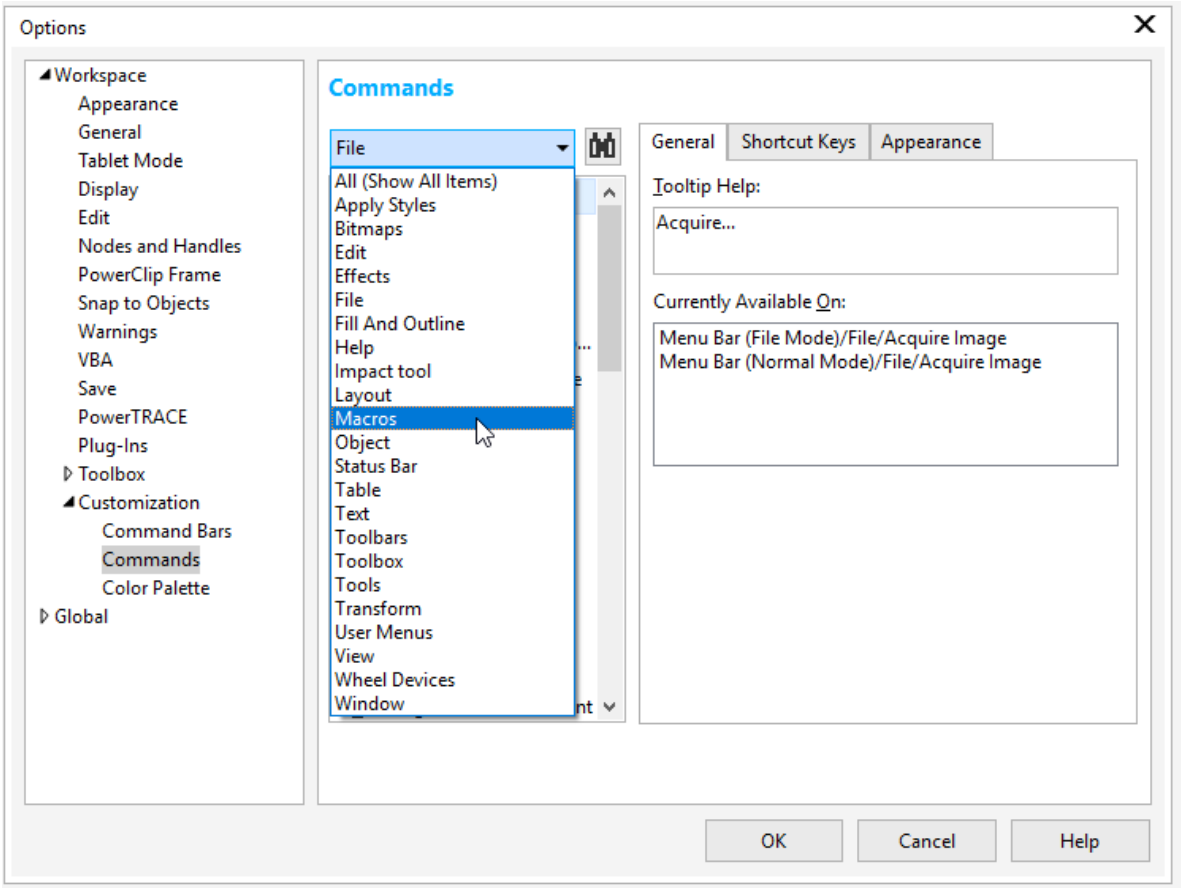

Select Commands, as shown here:

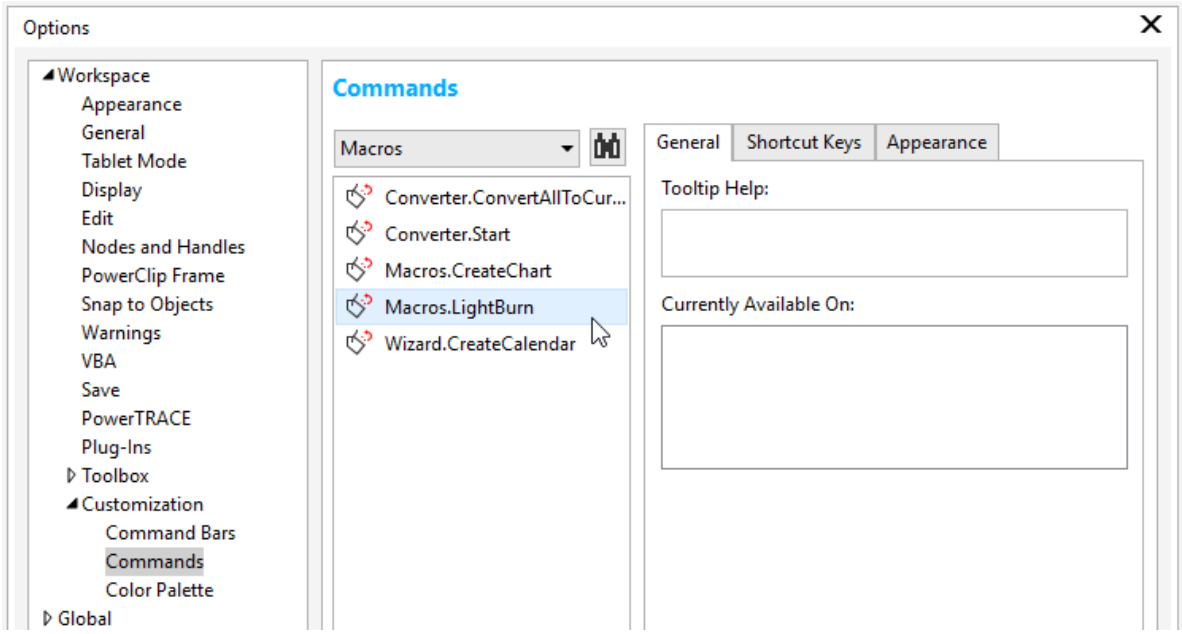

In the Commands pane to the right, click the drop-down box where you see "File", here:

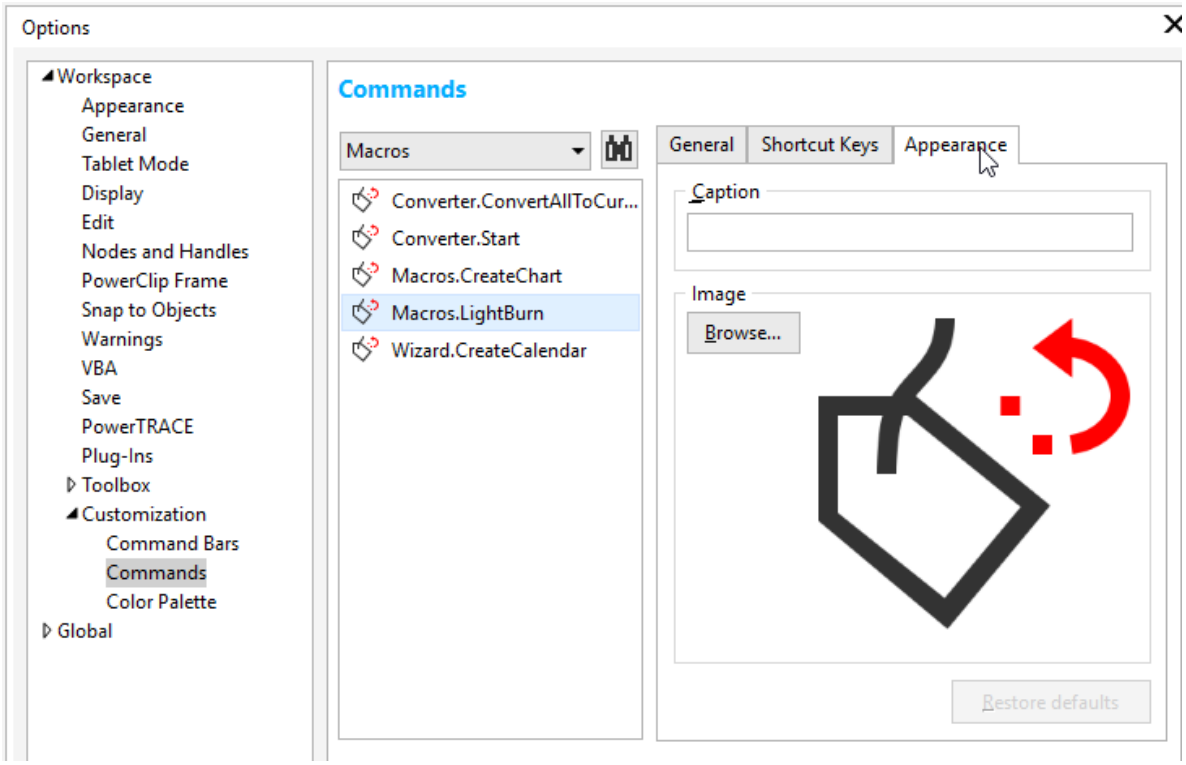

Choose the Macros entry in the list:

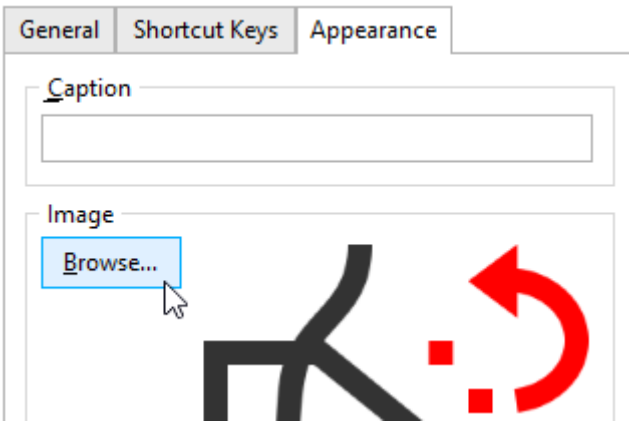

Select the LightBurn macro from the list:

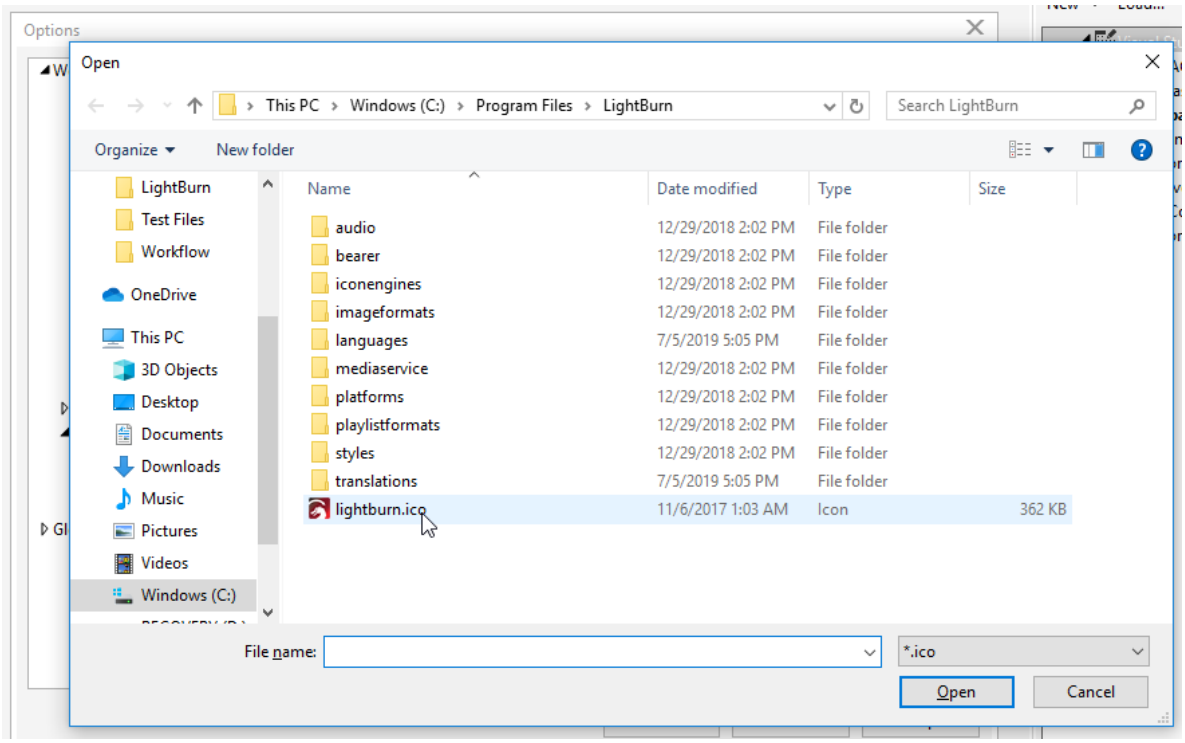

Click on the Appearance tab:

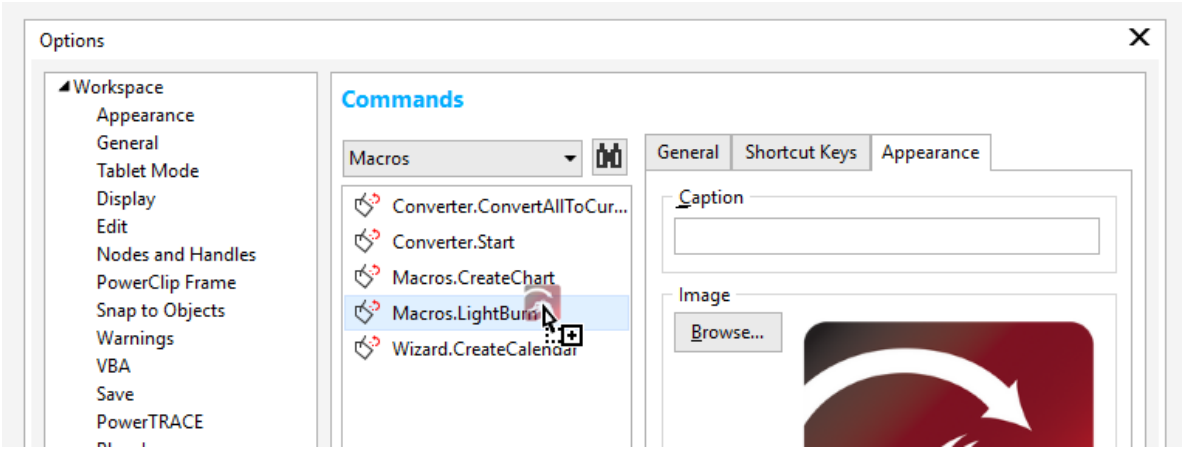

Click Browse to pick an icon:

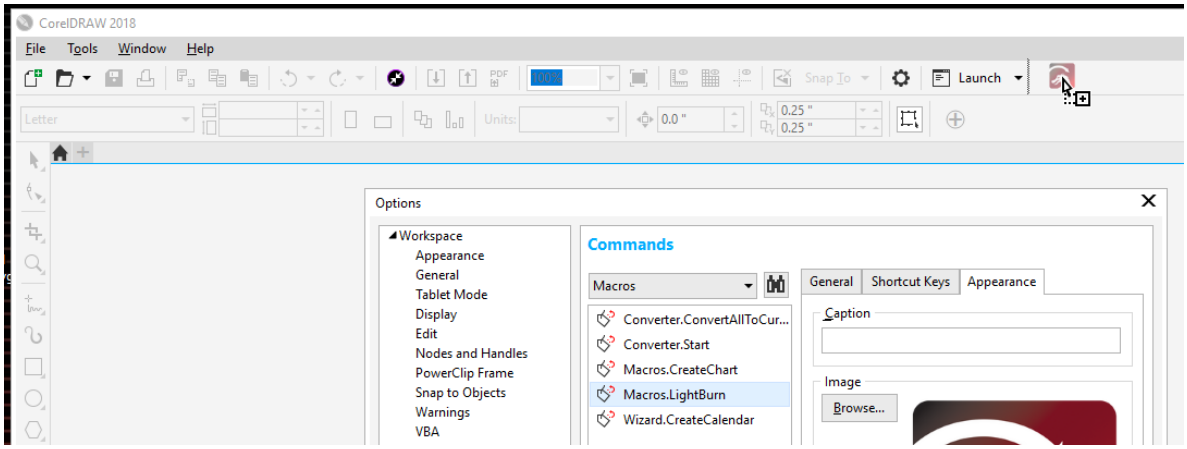

Find the LightBurn icon in C:\Program Files\LightBurn\:

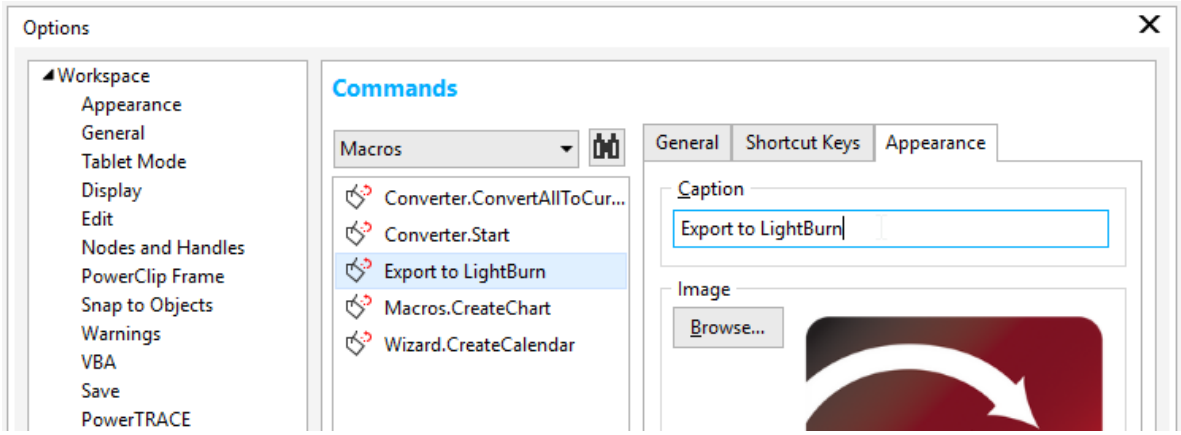

Grab the LightBurn command macro and drag it onto your toolbar, like this:

Set the caption to "Export to LightBurn":

That's it! The button on your toolbar will launch LightBurn with your current selection, or the whole file if you have no selection. You can close the Macro Manager window now.
